

FOR OPERATIONS LEADERS

The € 100k in your plant that no dashboard will ever show you.

Six pages on where it hides, and the ten-week way to prove it.

You already know this

**The losses are known
on the floor. They are
invisible in the numbers.**

The stop you “always just fix”. The off-spec batch written off as normal. The workaround only the night shift knows. None of it reaches a report, so none of it reaches the improvement it would unlock.

The method

Capture. Connect. Execute.

Capture what your operators see. Connect it to your machine data on one timeline. Execute the improvement as standard practice. That is how a hunch on the floor becomes a change you can prove and repeat.

What it is worth

**One verified
improvement, repeated.**

€ 50–100k

Per line, per year, on deliberately conservative assumptions. Then multiply by your lines and sites. Illustrative, not a promise.

The offer

A data analysis on one line. Ten weeks.

One clear question, answered against your own numbers. You know your payback before the proof starts, and the entry fee is credited in full. No rip-and-replace, no new hardware on day one.

Ready to see your own floor's blind spots?

Book a data analysis with us. We start with the data you already have, on one line, with your numbers.
