FOR OPERATIONS LEADERS

**€ 100k is walking
out of your
plant this year.**

No dashboard will ever show you where.

You already know it is there. ↓

Does this sound like your floor?

- ✓ The stop you “always just fix”, and never log.
UNPLANNED DOWNTIME
- ✓ The off-spec batch everyone has written off as normal.
DEFECTS
- ✓ The workaround only the night shift knows.
TRIBAL KNOWLEDGE
- ✓ The shift that quietly stopped following the standard.
NON-STANDARD WORK

Tick even one? Keep going.

oppr.

HERE IS THE GAP

YOUR OPERATORS

**See every one of
these.**

YOUR SYSTEMS

See none of them.

That gap is the € 100k.

Known on the floor. Invisible in the numbers.

So the loss never reaches a report, and never reaches the fix it would unlock. It just repeats, quietly, every shift.

oppr.

THE METHOD

Capture. Connect. Execute.

01 • Capture

What your operators see.

02 • Connect

It to machine data, on one timeline.

03 • Execute

The fix, as standard practice.

oppr.

WHAT IT IS WORTH

€ 50–100k

Per line. Per year.

One verified improvement, repeated. Deliberately conservative, then multiplied by your lines and sites.

oppr.

THE OFFER

One line. One question. Ten weeks.

Answered against your own numbers. You know your payback before the proof starts.

✓ Entry fee credited in full

✓ No rip-and-replace

✓ No new hardware

oppr.

Find the € 100k on your floor.

Book a data analysis. We start with the data you already have, on one line, with your numbers.
